

PAULA BOTTALE

Full Stack Developer · React + Node + TypeScript · Building AI-Integrated Products

Buenos Aires, Argentina | paulabottale.dev@gmail.com | +54 11 3160-8912

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Full Stack Developer building AI-integrated products with React, TypeScript, Node.js and the Anthropic Claude API. Hands-on experience integrating LLMs in production through secure backend proxies, prompt engineering, and real-time AI experiences on the frontend.

Background of several years in operations and customer-facing roles, with strong product thinking and a user-centric approach to software. Formal training in Full Stack Web Development at UTN, Argentina. Working with Agile methodologies (Scrum, Kanban) and CI/CD pipelines.

Open to Full Stack, Frontend, or Backend Developer roles at product companies — especially those building with AI integration, LLMs, or agentic systems.

TECHNICAL SKILLS

Languages: JavaScript · TypeScript · HTML5 · CSS3

Frontend: React · Tailwind CSS · Responsive Design · React Router · React Hooks · Context API

Backend: Node.js · Express · REST APIs · JWT Authentication · RBAC · bcrypt · Mongoose

Databases: MongoDB · MongoDB Atlas

AI Integration: Anthropic Claude API · Prompt Engineering · LLM Integration

Architecture: Multi-Tenant Architecture · SaaS Architecture · MVC

DevOps & Tools: Git · GitHub · Vercel · Render · CI/CD · Postman · Swagger

Design Tools: Figma (basic) · UI Understanding

Methodologies: Agile · Scrum · Kanban

KEY PROJECTS

LEDGR — Multi-tenant Fintech SaaS for Financial Management [Live Demo](#) · [Frontend](#) · [Backend](#)

React · TypeScript · Tailwind v4 · Node.js · Express · MongoDB · Mongoose · JWT · bcrypt · Render · Vercel

- Architected and shipped Phase 1 of a multi-tenant SaaS with organization-based data isolation at the model level — every record strictly scoped to its company.
- Built complete authentication flow: JWT token persistence, automatic session validation on app load, and protected routes guarding unauthenticated access.
- Designed Node.js + Express + TypeScript REST API following MVC architecture with Mongoose schemas, bcrypt password hashing, and safe JSON serialization via toJSON transforms.
- Connected React + TypeScript + Tailwind frontend using Context API for global auth state and custom hooks for clean separation of concerns. Backend on Render, frontend on Vercel.
- Roadmap: financial dashboard with real-time metrics, Stripe payments with webhooks, and an AI financial agent powered by the Claude API for natural language reporting.

SMART WORKOUT PLANNER — Full Stack SPA with Claude API integration in production [Live Demo](#) · [Frontend](#) · [Backend](#)

React · TypeScript · Node.js · Express · Tailwind · Anthropic Claude API · Vercel · Render

- Two decoupled services: React frontend deployed on Vercel and Node.js backend on Render acting as secure proxy to the Anthropic Claude API.
- Implemented dual-layer security: server-side API key management + rate limiting (5 req/15min) to prevent abuse and protect the LLM endpoint.
- Designed prompt engineering from scratch to produce consistent, useful AI-generated workout routines based on user inputs.
- Real-time markdown rendering of LLM responses on the frontend with proper loading and error states.

STORIFY — Full Stack E-commerce Platform with JWT & RBAC [Live Demo](#) · [Live API](#) · [GitHub](#)

React · TypeScript · Node.js · Express · MongoDB · JWT · RBAC · Vercel · Render

- Two user roles (Admin/User) with Role-Based Access Control validated server-side on every protected endpoint.
- Designed 10+ RESTful endpoints covering full CRUD operations for products, users, authentication, and admin panel.
- Decoupled architecture with independent CI/CD pipelines for frontend and backend, deployed on Vercel and Render.
- Integrated MongoDB for product storage and management, with admin-created products persisted and served through the API.

DIGITAL LIBRARY API — REST API with Swagger documentation [Live Swagger](#) · [GitHub](#)

Node.js · Express · TypeScript · MongoDB · Swagger UI

- REST API with interactive Swagger documentation for testing and reference.
- MVC architecture with Mongoose schemas, proper HTTP status codes, and consistent error handling.
- Full CRUD operations with input validation and structured response patterns.

PROFESSIONAL EXPERIENCE

Independent Full Stack Developer | Self-employed | Remote

March 2026 - Present

- Architected Ledgr, a multi-tenant fintech SaaS with organization-level data isolation, JWT authentication, and a roadmap including Stripe webhooks and AI agents powered by the Claude API.
- Built Smart Workout Planner, integrating the Anthropic Claude API in production via a secure Node.js backend proxy with dual-layer security and prompt engineering designed from scratch.
- Developed Storify, a full-stack TypeScript e-commerce platform with Role-Based Access Control validated server-side, 10+ REST endpoints, and decoupled CI/CD pipelines.
- Designed and documented Digital Library API with Swagger UI, MVC architecture, and proper HTTP error handling.

Business Operations Coordinator | FITER | Buenos Aires, Argentina

February 2024 - March 2026

- Managed customer relationships and the full sales pipeline using SGC, the company's CRM platform, tracking leads, opportunities, and customer interactions across the entire sales cycle.
- Implemented and operated WhatsApp Business API for lead capture and customer communication, optimizing response times and lead-to-customer conversion rates.
- Generated operational and commercial reports through CRM data analysis, providing actionable insights for management decisions at the branch level.
- Processed payments and coordinated administrative workflows between sales, operations, and finance teams, ensuring accuracy and timeliness in financial transactions.

Earlier Experience | 2022 - 2024

Administrative and customer-facing roles in retail and services sectors.

EDUCATION

Full Stack Web Development Diploma | UTN (Universidad Tecnológica Nacional), Argentina | Completed May 2025

Blockchain-verified certificate: [View Certificate](#)

Coursework: JavaScript, TypeScript, React, Node.js, Express, MongoDB, REST APIs, JWT Authentication, Agile Methodologies (Scrum, Kanban), Git/GitHub, MVC Architecture, Frontend & Backend Development.

LANGUAGES

English: Professional Working Proficiency (B2)

Spanish: Native
